LAB PARTNER

Gidon Kessler was my first lab partner. We worked efficiently in the labs and often helped each other out before the start of the tutorial labs.

Daniel Ma was my second lab partner and we communicated online a lot. This was for the mandelbrot task which needed a good deal of preparation.

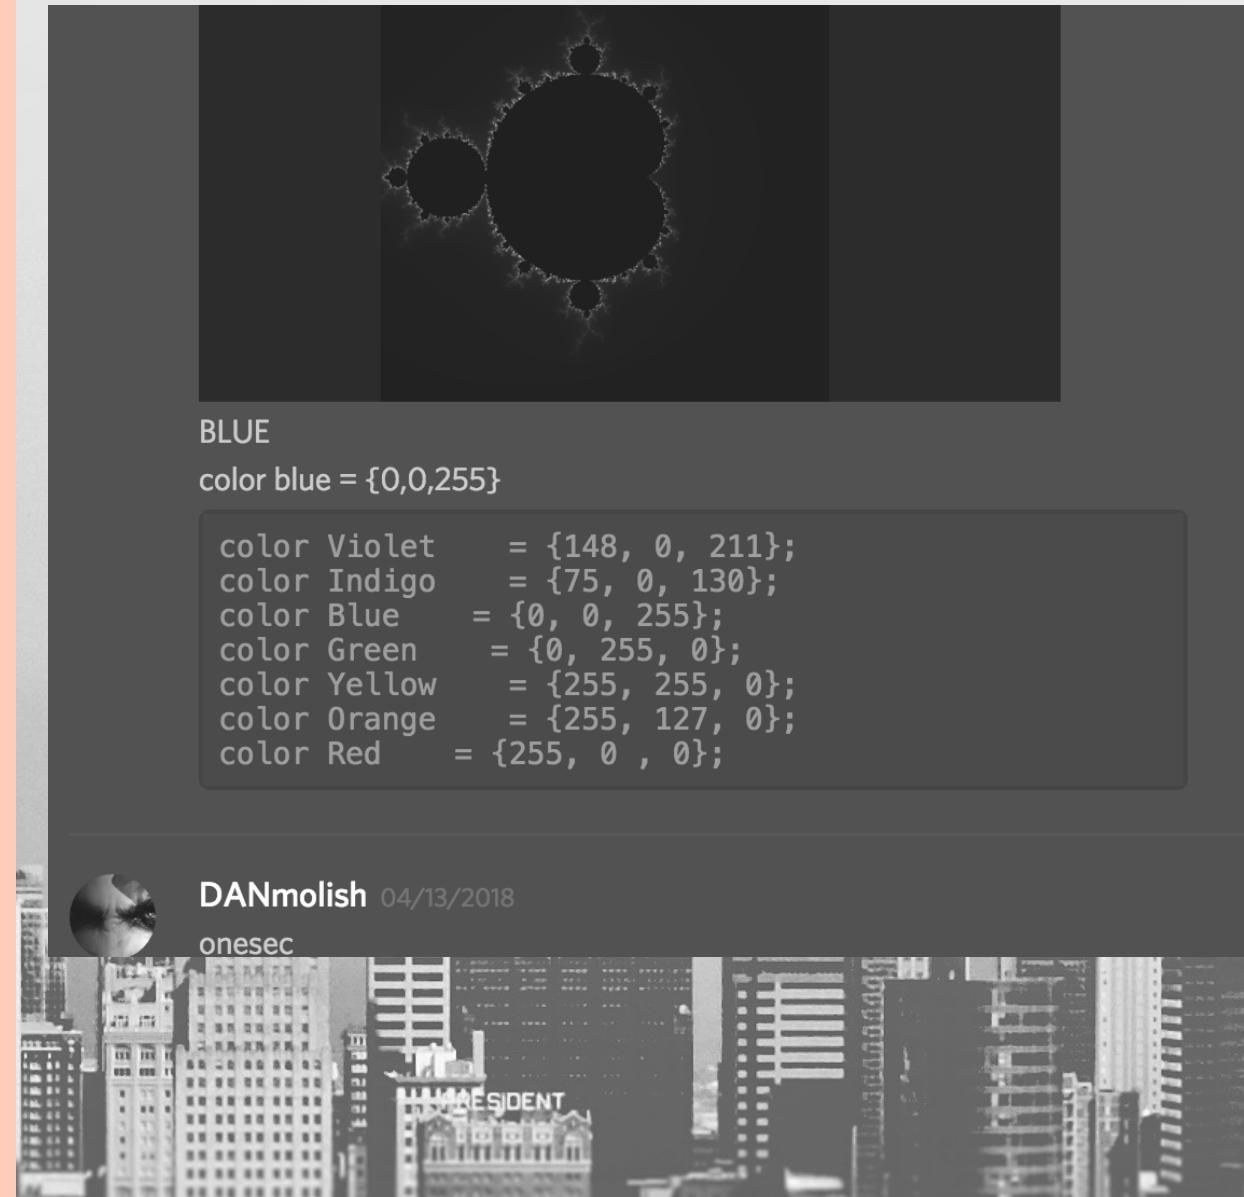

The screenshot shows a code editor with a dark theme. At the top, there is a horizontal bar divided into seven equal-width colored segments: purple, dark blue, light blue, green, yellow, orange, and red. Overlaid on these segments are the letters 'V', 'I', 'B', 'G', 'Y', 'O', and 'R' respectively. Below this bar, the following code is visible:

```
    } color
    } color;
color = {255,255,255}
color white = {255,255,255};
color redColor
gradient(int steps, color ColorOne, color ColorTwo)
```

Below the code, there is a user comment from a user named "jyuuk" dated "04/13/2018". The comment reads:

```
newColor = gradient(5, red,orange)
red from color one
and red from color two
200 255
55
100 200
```

MANDELBROT

"The task was difficult but it was doable with enough time and effort"

My lab partner Daniel and I worked together on assignment 2. We decided early on that we needed to optimize our approach so we did the basic code for the Mandelbrot together, and then worked on the color and server independently occasionally asking each other for help. In the end, we made great progress.

stuff

Knowledge Island was definitely much harder compared to the other assignments based on sheerly how big of a task it was. Considering that we only had 3 people working together for weeks where people had exams and were busy I'm proud of what we've accomplished. We communicated on discord frequently and on Facebook and made use of GitHub to save and share our code.

CHESSBOARD

I mostly understood the concept of the chessboard activity and made a lot of progress. After getting stuck a few times I asked for help and made great progress.

Here is the final product. A BMP file containing a chessboard!
